

Three ways to protect the environment (1st term exam - Short text)

By 1516 2B Harry Zhao Jun (24)

Three ways to protect the environment

First, we can recycle paper, cans and bottles to create new things to use. That will help us not to waste the things we have.

Then, reduce is a good idea to solve the pollution problems. We can use less air-conditioning to save energy. We shouldn't buy things if we don't need them. Don't buy too much meat because it may waste much water. It is good to save our environment.

Last, reduce is like recycle, but you don't need to collect things. You just use them many times if the things are not broken and not too old.
